

Salesforce Apex - Day 2 Codes

OrderItemUtility

```
public class OrderItemUtility {  
    public static void addBonusBouquet(List<Order> ordersFromTrigger) {  
        // SOQL + DML logic for bonus bouquet  
    }  
}
```

CreateContactFromCan

```
public with sharing class CreateContactFromCan {  
    public static void createContact(List<Candidate__c> candsFromTrigger){  
        List<Account> candAccts=[SELECT Id,Name FROM Account WHERE Name='Recruiting'];  
        List<Contact> conList=new List<Contact>();  
        for(Candidate__c c:candsFromTrigger){  
            conList.add(new Contact(AccountId=candAccts[0].Id,FirstName=c.First_Name__c,LastName=c.L  
        }  
        Database.insert(conList);  
    }  
}
```

CreateContact Trigger

```
trigger CreateContact on Candidate__c (after insert){  
    CreateContactFromCan.createContact(trigger.new);  
}
```
